

Enr. No. : 2302030430112

Assignment : 1

[Ans 1 : ]

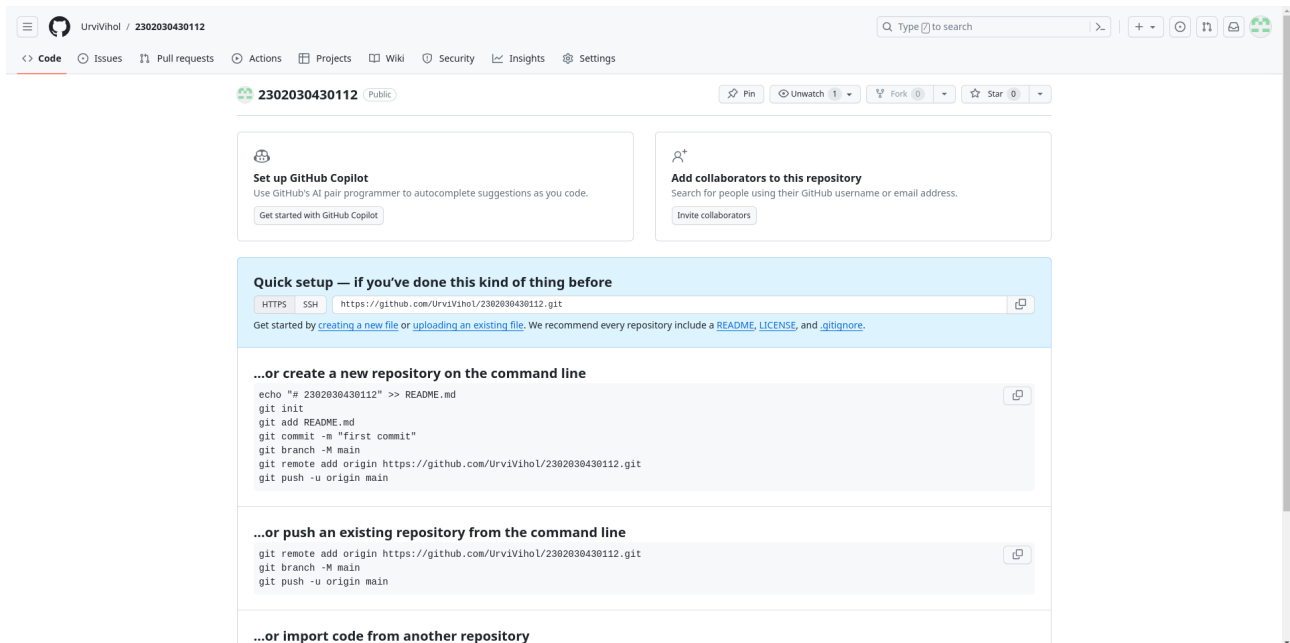

Step 1: click on the “New” button to create a new repository.

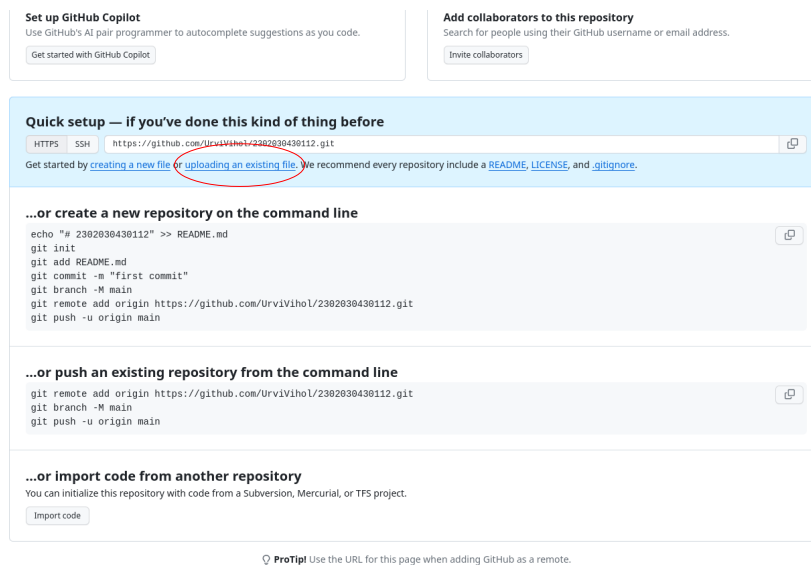

Step 2 : Give the name of the repository. Make it public or private by clicking on the given options. Add a README file if you want to. After that click on the “Create repository” button.

A screenshot of the 'Create a new repository' form on GitHub. The form includes fields for 'Repository name' (with the value '2302030430112' and a red circle around it), 'Description (optional)', and radio buttons for 'Public' (selected, circled in red) and 'Private'. Below these are sections for 'Initialize this repository with:' (including 'Add a README file'), 'Add .gitignore', and 'Choose a license'. At the bottom right, there is a green 'Create repository' button circled in red.

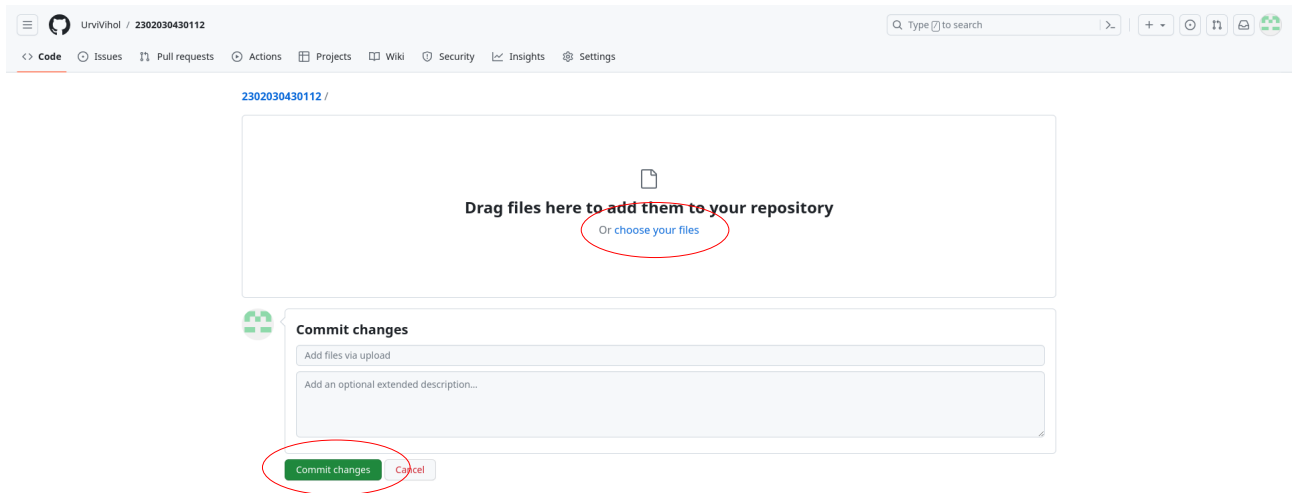

Like that, your GitHub repository has been created successfully.

Step 3 : Scroll down and you will see the option for importing code.

Click on “uploading an existing file” and you can start importing the code files and folders to your REPO or follow the commands and execute them.

Or you can Click on “choose files” or drag and drop your files or folders and upload them.
